GENERATION

Evolution of Paint - The Graphenstone Age Has Arrived

The Perfect Mix - Eco-Preferred Paints That Purify The Air

With an eye on the past we looked at high purity lime and minerals and how these materials interacted with the natural environment. Providing carbon dioxide absorption, breathability, mild anti-bacterial and insecticide benefits.

Looking beyond today, we reduced or replaced the reliance on synthetic polymers. Developing a new support structure from a carbon based nanoparticle, graphene. This material is naturally sourced which provides strength, flexibility and durability. Creating paints that are low in toxicity which offer unparalleled functionality and environmental benefits.

Eco-Preferred Paints For Interiors

Atmosphere Interior

A water based, Ultra Low VOC paint system developed using mineral silicates and a graphene/ acrylic hybrid. Providing passive functionality from an active ingredient which absorbs over 65% of atmospheric formaldehyde in the first 24 hours after it is applied, breaking it down into an inert vapour.

Ecosphere

"The world's most advanced interior paint. Water based, Ultra-Low VOC paint system blended with high purity lime and graphene, providing strength, durability and passive functionality by capturing and locking in carbon dioxide (CO₂). As little as 45 litres of Ecosphere will capture the same amount of CO₂ as a mature tree does in 12 months."

Eco-Preferred Paints For Exterior

Atmosphere Exterior

A water based, Ultra Low VOC paint system developed using mineral silicates and a graphene/acrylic hybrid offering excellent cleanability and durability.

Biosphere

"The world's most advanced exterior paint. Water based, Ultra-Low VOC paint system blended with high purity lime and graphene providing strength, durability and passive functionality by capturing and locking in carbon dioxide (CO₂). As little as 45 litres of Biosphere will capture the same amount of CO₂ as a mature tree does in 12 months."

TRANSFORM YOUR HOME

INTO A *Tree*

BY PAINTING!

Paints that purify the air? 3 very good reasons why this is important.

You, your family and the Earth.

Graphenstone paints have been developed to provide the lowest possible levels of volatile organic compounds (VOC's) without any harmful emissions. They also provide new levels of functionality or as we call it, Passive Functionality. This means that not only do Graphenstone paints provide a feeling of tranquility in your home but are actually working for us all, acting like a silent sentinel purifying the air.

Removing carbon dioxide (CO₂)

Produced by a fossil fuel free, Cradle to Cradle platinum certified process, high purity lime in the Ecosphere and Biosphere paints absorb CO₂ as it dries or carbonates, locking it in for good.

Every time you paint you can transform your home into a tree.

As little as 45 litres will absorb as much CO₂ as a mature tree can in 12 months!

Your house can create a healthier environment for you and your family, while contributing to clean the air in cities and help in combating global warming. Make it happen, let your house absorb as much CO₂ as a mature tree by using Graphenstone paints

Come join our project to achieve the same effect as 1 million trees
